

A Method and System for Selling Assets Over a Computer Network

Abstract

5

A method and system for selling re-sellable assets over a computer network is provided. In one embodiment a lessor provides a list of re-sellable assets to an asset seller. The asset seller lists the assets on a server computer, which can be remotely searched by a buyer at a client computer. The buyer can then purchase the asset or bid on the asset in the case of an auction.
